## Benefits of NetOne's Message Continuity Service

Businesses that rely on email can easily generate thousands of new messages every day, putting their ability to economically and efficiently store email in-house in constant jeopardy. NetOne can relieve the pressure on your organization with unlimited, in-the-cloud storage that scales appropriately to fit your needs.

Our easy-to-use managed Message Continuity Service is always up, never grows obsolete, and doesn't require the ongoing management and maintenance associated with hardware-based solutions. The service securely "pulls" messages from your server and stores them using 256-bit encryption.

- ✓ Secure, tamperproof storage
- ✓ Dual commit message capture eliminates message loss

## Finding a Needle in a Stack of Needles

Whether you need to recover a stored email message in response to an eDiscovery request, to demonstrate compliance, or simply as an accurate record of "who said what to whom", you need to produce the message as quickly as possible. With the Message Continuity Service, you can easily access one message - or thousands of messages - in seconds, using either simple or complex search criteria, including user, date range, message content, or even attachment content.

Through our unified management platform, our service administrators can easily set up and view multiple saved searches, with unparalleled ease.

- ✓ Search current and historical archives from a single console
- ✓ Robust search criteria to satisfy discovery and compliance needs
- ✓ Search message content and attachment details
